7. Information I'll Need From You	

1 Introduction

Great news — the Chindela Interactive Storybook Platform is almost ready to go live. Everything you've seen and tested has been built and is working.

What's left is not about building anything new. It's simply about connecting the platform to a small number of outside services that will keep it running smoothly for real families — things like secure file storage, email delivery, and web hosting.

These services need to be set up in **your organisation's own name**, so that MJ CIC owns and controls its own data, its own domain, and its own accounts going forward. This is completely standard for any modern website and is simply good practice — it means everything belongs to you, not to any third party.

To be clear about who does what: your only job is to create a short list of accounts and share some resulting details with me securely. I will take care of every technical step — connecting each service, configuring it correctly, testing it thoroughly, and deploying the live website. You do not need any technical knowledge to complete your part.

This guide walks through exactly what to do, in plain language, with no technical background required.

2

Accounts You Need To Create

Below is every account needed before launch. For each one, you'll find why it's needed, roughly what it costs, a link to sign up, and exactly what to send me afterwards.

AWS (Amazon S3 Storage)

Secure cloud storage for all files

WHY IT'S NEEDED

Chindela stores every storybook image, audio recording, video and document your team uploads. This needs a secure, reliable place to live outside of the website itself.

WHAT IT'S USED FOR

Amazon S3 (Simple Storage Service) is used to store and safely deliver every media file used across the platform — story illustrations, character images, narration audio, and more.

Free to start

aws.amazon.com ↗

WHAT TO SEND ME AFTER CREATING THIS ACCOUNT

- Nothing yet — once your account is created, just let me know and I'll take it from there.

Resend

Delivers account and notification emails

WHY IT'S NEEDED

Chindela needs to send emails to parents — welcome messages, password resets, and payment receipts. Resend is a reliable, modern email delivery service that ensures these emails actually reach the inbox.

WHAT IT'S USED FOR

Every automatic email the platform sends to a parent (such as "reset your password" or "your subscription is active") is delivered through Resend.

Free to start

resend.com ↗

WHAT TO SEND ME AFTER CREATING THIS ACCOUNT

- Nothing yet — once your account is created, just let me know and I'll take it from there.

Production Hosting

Where the live website runs, 24 hours a day

WHY IT'S NEEDED

A website needs a "home" on the internet that is always switched on. This is called hosting.

WHAT IT'S USED FOR

We recommend **Railway**, a simple, modern hosting provider that is well-suited to how Chindela is built, and can conveniently host both the website and its database in one place. (Vercel is another well-known option, but is generally better suited to a different style of website — Railway is the better fit here.)

Low monthly cost

railway.app ↗

WHAT TO SEND ME AFTER CREATING THIS ACCOUNT

- Nothing yet — once your account is created, just let me know and I'll take it from there.

Production MySQL Database

Where all real family and story data will live

WHY IT'S NEEDED

Every family, child, story, and diary entry needs to be stored permanently and securely once the platform goes live for real users.

WHAT IT'S USED FOR

A production database is simply a more permanent, secure version of the database used during development. If you set up hosting with Railway as recommended above, the database can live there too, in the very same account.

Low monthly cost

railway.app (or PlanetScale: planetscale.com) ↗

WHAT TO SEND ME AFTER CREATING THIS ACCOUNT

- Nothing yet — once your account is created, just let me know and I'll take it from there.

Domain Name

Your website's address, e.g. www.chindela.org

WHY IT'S NEEDED

Families need a simple, memorable web address to find and trust the platform, rather than a long technical link.

WHAT IT'S USED FOR

The domain name you choose will become the official public address for the Chindela website.

Roughly £10–£20 per year

namecheap.com (or godaddy.com) ↗

WHAT TO SEND ME AFTER CREATING THIS ACCOUNT

- Skip this step entirely if MJ CIC already owns a domain name you'd like to use.

All prices above are approximate and based on typical usage for a platform of this size — actual costs depend on your usage and any offers available at the time of sign-up.

3

Stripe: One Final Step

Good news — Stripe, the service that processes subscription payments, is already fully set up. The necessary Stripe keys have already been received and connected to the platform, so no new Stripe account or setup is needed from you here.

There is just **one small remaining step**, and it can only be done once the website has an official, live web address (which happens during deployment). It's called a **webhook secret** — in simple terms, it's a secure code that lets Stripe safely notify the website the moment a real payment is successful.

How This Will Be Done

1. Once the website is live at its permanent address, I will open the Stripe Dashboard.
2. I'll add the website's new address as an official "endpoint" — the place Stripe should send payment updates to.
3. Stripe will then automatically generate a new, secure webhook secret for that address.
4. I'll securely connect that secret to the live website, completing the payment setup.

This step is quick, low-risk, and fully handled as part of deployment — it's mentioned here simply so you understand what it is if you see it referenced later.

4

Gemini AI: Nothing Needed

Chindela's AI Tutor feature is powered by Google Gemini. The Gemini API key has already been provided and fully integrated into the platform.

No further action is required from you for this. It's included here only so this guide gives you a complete picture of everything the platform depends on.

5 Deployment Checklist

Here is the complete path to launch, in order. Each step shows whether it's something you'll do, or something I'll take care of.

☐ Create AWS account
Your action

☐ Create S3 bucket
I'll handle this

☐ Create Resend account
Your action

☐ Verify email domain
I'll handle this

☐ Create production database
I'll handle this

☐ Purchase / connect domain (if needed)
Your action

☐ Deploy website
I'll handle this

☐ Generate Stripe webhook
I'll handle this

☐ Final testing
I'll handle this

☐ Launch
I'll handle this

6

What Happens Next

Here's the simple, step-by-step journey from today to launch day:

1

You create the required accounts

Using the links and guidance in Section 2, you set up each account under MJ CIC's own name. This usually takes well under an hour in total.

You

2

You share the requested details with me, securely

Once each account is created, you send me the specific details listed in Section 7 — nothing more, nothing technical to figure out.

You

3

I configure every service

I connect each account to the platform, set everything up correctly, and prepare the live environment.

Me (Sameer)

4

Full production testing

I thoroughly test every part of the platform in its real, live setup — logins, payments, emails, storybooks and the AI tutor — to confirm everything works exactly as expected.

Me (Sameer)

5

Website is deployed

The platform goes live at your new web address.

Me (Sameer)

6

Final review

We do one last walkthrough together before opening the doors to real families.

Me (Sameer)

7

Public launch 🎉

Chindela officially goes live for families to register, subscribe, and start reading.

Me (Sameer)

7 Information I'll Need From You

To keep things simple, here is the complete — and only — list of information I'll need from you. Anything not listed here has already been taken care of.

ITEM	WHERE TO FIND IT
AWS Access Key ID	Shown in your AWS account after creating a security key
AWS Secret Access Key	Shown alongside the Access Key ID (shown only once — I'll guide you)
AWS Region	Shown in your AWS account (e.g. "eu-west-2")
AWS S3 Bucket Name	I will create this and confirm the name with you
Resend API Key	Shown in your Resend account dashboard
Verified Sender Email / Domain	The email address or domain you'd like emails sent from
Production Hosting Details	Login access or an invite to your hosting account
Production Database Connection	Provided automatically once the database is created
Production Domain	The web address you'd like families to visit
Stripe Webhook Secret	Generated automatically after deployment — no action needed from you

That's the complete list. Nothing here requires technical knowledge — for most items, you're simply copying a code or a name from a webpage and sending it to me securely (for example, by a password manager's sharing feature, or a private message rather than plain email, where possible).

You're Almost Ready to Launch!

The platform is built, tested, and waiting. All that stands between today and launch day is a short list of accounts — and I'll be with you every step of the way.

- ☒ Platform development — complete
- ☒ Stripe payments — connected
- ☒ Gemini AI tutor — connected
- ☐ Accounts created by MJ CIC
- ☐ Final configuration & testing
- ☐ Public launch

Questions at any point? Just reach out — happy to walk through any of these steps together.
